

UPCOMING WORKSHOP

Our popular FIFRA Boot Camp I for Pesticide Registrants will be held again on November 8 & 9 (Wednesday and Thursday), 2006. Previously held over twenty times, this workshop has become the gold standard for industry, regulators, attorneys and consultants.

It always fills up very fast and we end up turning people away. If you or a colleague wish to attend in November, we urge you to sign up now.

This intense, two-day workshop is built around an integrated, structured curriculum taught from a real-world perspective by leading scientists, regulatory experts and attorneys.

Topics covered during the workshop include:

- Conventional Pesticides, Antimicrobials and Bio-Pesticides - Do the Differences Matter?
- Is It a Pesticide and If So, Is It Regulated by EPA?
- What is a Device Verses a Pesticide?
- Label Requirements and Associated Labeling Claims
- Understanding the Types of Registrations Available from EPA and How They Fit into Your Company's Business Strategies
- PRIA Fee-For-Service Requirements and What They Mean to Your Company
- Using the Part 158 Data Tables - What the Regulations Say, Verses the Real World
- Data Requirements for New and Existing Active Ingredients - It Costs How Much???
- Data Citation, Compensation and Cost Sharing -

Negotiation and Arbitration

- Re-registration and Data Call-Ins - Does it Ever End???
- Other (Inert) Ingredients - Understanding EPA's Confusing Requirements
- Import and Export Requirements
- State Regulatory Programs - What Ever Happened to Preemption?
- Adverse Effects Reporting Requirements
- Regulatory Requirements for Pesticide Production and Pesticide Producing Establishments
- Enforcement Issues - Some Days You Eat the Bear, and Some Days the Bear Eats You

Our new location - the Hyatt Regency in Crystal City near Washington's Reagan National Airport - is across the street from EPA's Office of Pesticide Programs' new building, thus allowing you to also meet with EPA (make an appointment first, however!) while in the Washington, DC, area.

To register online or to obtain more information, go to <http://www.pesticide.net/workshop>. However, space is limited and the workshops fill up very quickly, so don't delay.
